

Statement of Sustainability

At Stotz Equipment, we cultivate Economic, Social, and Environmental sustainability and the relationship between these three factors. This empowers our employees, communities, and all with whom we do business to affect change.

Whether using new technologies to reduce waste, lower expenses, or conserve time and resources, we're focused on identifying opportunities to increase efficiency while minimizing environmental impact. We believe this is what sustainability is all about, and that is why this initiative is core to our purpose.

Creating a better life for our families, communities, and those connected to the land.

Our sustainability path starts within the company. Stotz Equipment recently embarked on a new journey by instituting Continuous Improvement business practices into our culture. Using these principles, we focus on specific areas within our business to drive efficiency, productivity, and reduce waste.

To those outside the company, we are more than an equipment supplier. We are a solution provider focused on innovative ways to complete tasks. We offer not only the latest equipment, but processes supported by leading edge technology and data to accomplish jobs successfully and sustainably.

Our industry presents diverse opportunities to achieve substantial goals. Stotz Equipment's approach can save time spent maintaining a landscape, improve crop yield in a wheat field, reduce chemical use on a golf course, decrease fuel consumption while cultivating cotton, or determine exactly where alfalfa needs to be fertilized.

We help our partners support sustainable practices. We strive to be stewards of the land. We are committed to conservation for generations to come.
